## Weekly Club Net

Join us on the URAC Club Net Thursdays at 8:00 P.M. 145.510 simplex.

## K6AA monitors

Frequency 145.51 MHz

## Club Station K6AA

Website: [k6aa.org](http://k6aa.org)

The club station is located in the Los Angeles Maritime Museum and is open to club members during museum operating hours.

The January meeting of the United Radio Amateur Club will be held SATURDAY, January 4<sup>th</sup>, in conjunction with the *First Saturday Breakfast*, 8:00 am at the Think Café (302 W 5<sup>th</sup> Street) in San Pedro.

## The Officers volunteering for this year:

President:	Ivan Mikulich	KB6ATT
Vice Pres:	John Linder	KC6JHV
Secretary:	Janet Meek	
Treasurer:	Gary Forister	N6HMR
Past Pres:	Sam Lollar	K1SL
Director:	Steve Mandich	K6NT
Director:	Larry Fadden	KK6TXN
Director:	Homer Meek	K6HKT
Director:	John Rockwood	WA6SDK

## Program

Ed Steiner ... Volunteer with the Topsail Youth Program for 26 yrs. That's the Tall ships operating out of San Pedro. I've known of you and your "Ham" association for a really long time. I remember seeing you the first time I was in the Maritime Museum. Otherwise, retired from a career in International Distribution of Scientific Instrumentation and associated computer systems.

Program: Tall Ships

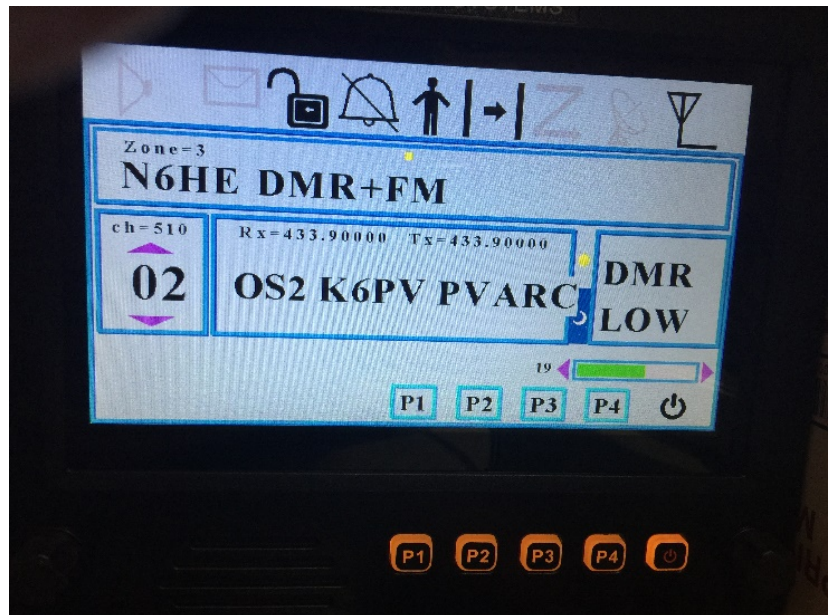

## **Holiday Party Prize Drawing**

The drawing for prizes was held with numbers drawn and matched to names on the entire roster. As unusual as it may seem, all six winners were in attendance at the dinner. Though attendance was not a requirement, someone suggested it was *good karma* - hi hi.

Mary Hochman  
John Linder  
Gina Mandich  
Steve Mandich  
Andrea Meek  
Norman Wright

## **Look what Santa brought**

Santa brought Ray N6HE a CS-BFD 7" x 8" display panel for his CS800D DMR+FM mobile radio (which is still in the shack for now as he gets used to it). Waaaaay better than the usual small displays on mobile rigs.

## **VISIT TO VA1MMA AT THE MARITIME MUSEUM OF THE ATLANTIC, HALIFAX, NOVA SCOTIA, CANADA**

### **... Martin Hochman N6UB**

Mary and I explored Halifax one day in the summer of 2019. Situated on one of the largest natural deep water harbors on the east coast of North America, Halifax is a great tourist destination with an interesting well-planned waterfront for tourists and locals, plus an attractive downtown with pleasant pretty parks. Among its waterfront features is the Canadian Museum of Immigration at Pier 21, where during the period of 1928 – 1971 about one million immigrants came into Canada by ship through Pier 21. Some of us in the U.S. are descended from ancestors that first came to North America through Halifax.

Another popular tourist destination on the waterfront is the Maritime Museum of the Atlantic (MMA), which contains the amateur radio station VA1MMA in “The Wireless Room” operated by the Halifax Amateur Radio Club (HARC). Although the station was not in operation when we visited, I did take photos of the radio station room, and among its contents is a vintage 1944 Marconi Model CM-11 taken from a World War II Canadian Naval Vessel which was restored by a member of HARC. There is also a modern amateur radio, an Icom IC-7600, and both radios use roof mounted antennas: a 10-12-15-17-20 meter multiband vertical and a 40-80 meter trap dipole. Much more information on HARC’s work with the MMA on creating The Wireless Room can be found by clicking on the link at the bottom of the Museum’s webpage on The Wireless Room, found at [www.maritimemuseum.novascotia.ca](http://www.maritimemuseum.novascotia.ca), under the Permanent Exhibits listing on the left side of the webpage which come up after clicking on “What to See & Do”.

Halifax has a connection with the sinking of the Titanic on April 15th, 1912, because although the

survivors – which were rescued by the Cunard liner Carpathia – were taken to New York City, the White Star Line dispatched four ships from Halifax to recover dead bodies still floating at sea, and while some of the recovered 614 (or so) bodies were buried at sea, the majority were taken to Halifax and many of these bodies are now in cemeteries in Halifax with appropriate memorials. The MMA has an extensive exhibit on the Sinking of the Titanic and Halifax’s role in the aftermath.

The MMA also has an extensive and fascinating exhibit on the atomic bomb sized maritime explosion which devastated Halifax on December 6, 1917. The port of Halifax was under the control of the military during this period as Halifax was a major point for shipping supplies to Europe for the war effort, and the city and surrounding areas were crowded with both military and civilians involved in the war effort and the port activities. On that fateful morning the French munitions ship Mont-Blanc was making its way through the Narrows to enter the harbor area (Bedford Basin) to become part of a convoy to Europe while the Norwegian merchant ship Imo carrying Belgian Relief Supplies was

outbound – but on the “wrong” side of the passageway for various reasons. As a result of numerous errors and miscommunications the Imo ran into the bow of the Mont-Blanc and the sparks of the collision ignited some of its flammable cargo – grains of dry picric acid stored below deck, which then ignited drums of benzol on deck putting up a large plume of black smoke. The ship’s crew

12,000 damaged, and 25,000 people lost their housing. A tsunami created by the blast also contributed to the devastation. The north clock face of the clock tower of the Halifax City Hall permanently shows 9:04, the time of the explosion.

Relief efforts came from all over Canada and the NE United States, particularly Boston and

elsewhere in Massachusetts. Since 1 in 50 people that were living in Halifax lost their sight due to injuries from the explosion (from flying glass shards), dealing with blindness became a high priority. This disaster led to the creation of the Canadian National Institute for the Blind.

Despite this very sad part of its history, modern Halifax is a delight to visit with many pleasure boats enjoying its waters, cruise ships making port calls, lots of restaurants and bars, a university population, interesting museums, pretty parks, historical locations and monuments, and a vibrant downtown. This is what we got out of our one long day in Halifax during our port call on a Holland

abandoned ship and as the ship drifted towards the shore of Halifax various fire-fighting efforts headed towards the Mont-Blanc, while crowds of spectators were drawn to the shoreline or to their windows to watch the burning ship. At 9:04:35 a.m. the ship exploded with the estimated force of 3 kilotons, the size of some of the first atomic bombs, as its cargo of TNT and gun cotton exploded along with the other flammable cargo. 100 km away in Truro windows were shattered from the blast. In Halifax an air blast and fireball destroyed everything within 1-4 miles, killing some 1,600 people instantly and another 400 or so dying within 24 hours from their injuries. 9,000 people were injured, many very seriously, including many who were shredded by glass fragments from windows and lost their sight permanently. 1,500 homes were destroyed and

America Line ship during our Voyage of the Vikings cruise; just imagine what more a few more days in Halifax might have revealed.

## **Everything should be made as simple as possible, but not simpler** **... Dan Romanchik KB6NU**

"Everything should be made as simple as possible, but not simpler" is a quote attributed to Albert Einstein ([reference link to quote](#)). Here's one way to apply this principle in amateur radio, specifically to code practice oscillators.

A week ago, my friend, Paul emailed me:

"I am planning on teaching a two-hour introduction to Morse code to 14 girls ages 8 to 9 (*Paul's granddaughter is a Girl Scout*). I plan on having the girls build a code practice device. I need your help in selecting a low cost buzzer and battery holder. Please take a look around and see would you can find. I would like to limit the power to one or two AA batteries."

I replied that I'd be happy to help him with the demonstration, and offered the following advice:

"A while back, I built the QRPGuys' K7QO Code Practice Oscillator (<https://qrpguys.com/k7qo-code-practice-oscillator>). It uses a CR2032 coin battery.

"Unfortunately, they don't sell it anymore, but the assembly manual is still online ([https://qrpguys.com/wp-content/uploads/2017/03/cpo\\_assy\\_012616.pdf](https://qrpguys.com/wp-content/uploads/2017/03/cpo_assy_012616.pdf)). The assembly manual doesn't call out specific parts, but here are some Amazon SKUs:

B00J4BK0NS, Black 3V Electromagnetic Type Piezo Buzzer, 20 pcs/\$6.58

B06XF3K4NP, Coin Cell Button Battery Holder, 30 pcs/\$9

B008SNZUYC, 3 Pin PCB Mount Female 3.5mm Stereo Jack, 10 pcs/\$5.40

B071RMD6FD, 1/8" 3.5mm Stereo Male Connector, 10 pcs/\$7

"Batteries are available at the dollar store for about 30 cents each. So, you could do the whole thing for less than \$5 for sure, even with a printed circuit

board, which I would suggest that we do. Heck, if you ask nicely, the QRPGuys might even give us the artwork, or even better, have some boards still in stock. Even if they have neither, you should be able to get the boards in plenty of time."

Later that day, Paul replied:

Thanks, Dan, for the information and making yourself available to help. I am just going to use a buzzer, key, and battery. The buzzer has a frequency of 400 Hz.

<https://www.xump.com/science/Buzzer-Leads15V.cfm>

<https://www.xump.com/science/ContactKeySwitch.cfm>

<https://www.xump.com/science/Single-AA-Battery-Holder.cfm>

And this morning, he sent me this photo, noting, "FYI. Also sounds great."

I think that this is as good an example of "Everything should be made as simple as possible, but not simpler" as there can be. I've volunteered to help Paul with his class. That will be fun, too.

=====

Dan Romanchik, KB6NU, is the author of the KB6NU amateur radio blog ([KB6NU.Com](http://KB6NU.Com)), the "No Nonsense" amateur radio license study guides ([KB6NU.Com/study-guides/](http://KB6NU.Com/study-guides/)), and often appears on the ICQPodcast ([icqpodcast.com](http://icqpodcast.com)). When he's not trying to keep things as simple as possible, but not simpler, he likes to build stuff and operate CW on the HF bands.
